ABOUT THE PROGRAM

This 3-day workshop offers a valuable opportunity to enhance research skills by exploring the fundamentals of research methodology, technology learning, and statistical analysis using SPSS software. Designed for researchers and academicians, it emphasizes practical, step-by-step applications of SPSS in data analysis, focusing on interpretation rather than computation. Participants will gain insights into research publication, including drafting manuscripts, structuring arguments, conducting effective literature reviews, and managing references using specialized software. The program also addresses critical aspects of authorship, plagiarism, publication ethics, and the intricacies of the journal submission and peer-review processes. In addition to these foundational skills, participants will engage in interactive group exercises, working on manuscript drafts and receiving personalized feedback from faculty. This workshop aims to equip participants with essential skills for academic publishing and practical competencies in SPSS, empowering them to conduct impactful research and advance their careers in academia and beyond.

OBJECTIVE OF THIS PROGRAM

The workshop aims to provide participants with essential skills in research methodology, statistical analysis, and SPSS programming. It focuses on building expertise in data interpretation, scientific writing, ethical research practices, and publishing in peer-reviewed journals, empowering researchers to conduct impactful and high-quality research.

WHO SHOULD ATTEND?

Faculties, Students, Data Analyst, and Researchers from all the fields. ***(All the registered participants will get certificate for this capacity development program.)**
